Management Information Systems graduate with a data analysis internship at Egypt's Cabinet of Ministers. I turn data into clear reports that help stakeholders make decisions. I build AI automation workflows to reduce manual work, save time and make business processes more efficient.

SKILLS

Data analysis: SQL / MySQL, Excel, Power Query, Power BI, DAX, Python / pandas, stakeholder reporting

Automation: n8n, RAG, evaluations (evals), guardrails, LLMOps, multi-agent workflows, API integrations, Supabase / PostgreSQL, JavaScript checks

EXPERIENCE

Data Analyst Intern & Policy Lab Trainee Jan to Feb 2026

Information and Decision Support Center (IDSC), Cabinet of Ministers of Egypt

- Cleaned and analyzed government data using SQL, Excel and Power BI, then prepared clear reports and visuals for non-technical stakeholders.
- Received a Policy Lab certificate for distinguished performance and analytical contribution.

Sales Trainee | Vesuvius Egypt Jun to Jul 2025

Supported day-to-day business-to-business sales and pipeline activities during training.

IT Technical Support Trainee | PlastTec Jan to Feb 2025

Helped log and troubleshoot hardware and software issues during training.

SELECTED PROJECTS

Sales Analysis | Excel | 2026

Analyzed **113,000 sales records**, caught fabricated duplicate records and flagged them. Built an Excel dashboard showing which products made more profit and how discounts quietly ate into profit.

E-commerce Sales Analysis | SQL, Power BI | 2026

Analyzed over **131,000 sales records** and found that **91% of revenue came from just three categories**, leaving the business heavily dependent on them. Built a Power BI dashboard showing lost sales, highlighted products with strong sales growth and showed where to focus improvements.

Firm Assistant | n8n, RAG, LLMOps, Evals, Guardrails

Built an assistant using retrieval-augmented generation (RAG) to answer document questions and query a database. Added automated evals, request logs and guardrails to route questions and restrict SQL to read-only queries.

Multi-Agent Research & Report Automation | n8n

Used multi-agent orchestration to coordinate research, analysis and writing agents, gather web sources and produce PDF reports with charts. Added checks to help ensure citations link to real, relevant sources.

AI Voice Receptionist | Planned project

Planned a voice receptionist to answer calls using company information, book appointments and hand off to staff, aiming to save front-desk time. Tests will cover booking conflicts, repeats, calendar failures, unavailable staff and changed minds. Bookings will be confirmed only after the calendar action succeeds.

EDUCATION

University of Bedfordshire, United Kingdom | MSA University

Bachelor of Business Administration 2021 to 2025

Management Information Systems

Languages: Arabic (native) | English (professional working proficiency)
